

FP Direct palletizer

Machine designed to automate the process of transferring cartons with frozen fish from freezing racks down to standard pallets. Pushing ALL shelves in one operation!

FP Direct Palletizer

The FP DIRECT palletizer is a huge step forward: a new solidly built FULLY ELECTRIC and pneumatic high capacity palletising system. There is no hydraulic involved that can cause spillage problems. The electric design will increase the operational reliability and lower the maintenance costs. This machine is designed to operate under very tuff environments and the design is very flexible. Various types of conveyors, buffer zones, plastic wrapping systems with fixed or rotating pallets gives us endless opportunities to fit this system for your requirements. The arrangement will be adjusted to fit the building and the desired capacity. Several actions have been taken to increase the overall performance of the machine. The smart innovative design gives your personnel an easy task in operating this reliable machine.

- The machine can handle different sizes of pallets and racks.
- Various types of conveyors
- Flexible buffer zones—adding conveyors
- Unloading all the shelves at the same time
- Various types of Plastic wrapping machines
- Pallet magazines
- Fully automated palletising process
