

# FP-EPS Lid applicator

Designed to apply lids on the polystyrene/EPS boxes, based on automatic feeding of boxes into the machine, and lids to the dispenser. The machine applies the lid on the box while it's transported through the machine, without any stop in line.

## Dynamic reliable Lid application for polystyrene/EPS boxes

An open design makes maintenance and regular operation easy. Hinged hatch covers are strategically placed on both sides of the machine, making it simple to monitor the lid application process. The machine has an innovative design with 2 separate conveyors and automated box control, lid dispenser, pneumatic lid application unit and press down unit by weight. It is possible to further integrate the machine to a strapping system or other surrounding systems such as ice dozing systems. The man-machine interface with touch screen combined with easy access, gives your personnel an easy task in operating this machine.

Capacity up to 20 boxes pr. Minute, with box size 400 x 800mm.
