

Freezing racks

Customised freezer racks for a supple production process

The Gurskøy Freezing rack is developed in close consultation with fish processing companies and systems suppliers. The racks are manufactured using robot welding, resulting in cost-efficient production and short delivery time.

The racks feature solid construction, accurate dimensions and superb technical solutions.

- The racks are customized for each individual production plant with regarding to height, number of shelves and intervals between shelves
- The Racks are stackable and locks together by steering brackets
- Truck can approach from all four sides
- The racks can be delivered with sliding shelves and adjusted to manual production lines.
- Suitable for use with other types of freezing racks
- Accurate intervals between the shelves ensures an optimum flow of air.
- Made of either got-dip galvanized steel or stainless steel
