

FP Carton erector

Machine designed to erect pre glued cartons.

Carton erectors

JT KR 20-0x is a very fast and flexible machine for both lids and bottoms and can be equipped with pneumatic pushers. The open design make maintenance and regular operation easy. Windows are strategically placed on both sides of the machine making it easy to monitor the carton erecting process. The hatches can be removed: simply lift them up and do the routine carefully explained in the user manuals. The machine has proven its ability out in the market and the feedback is overwhelming. This design is carefully planned to reduce noise and the linear motion of the suction cups should drastically increase the lifetime of the cups. The design of the vacuum system, the erecting system and the carton magazine combined with the easy access gives your personnel an easy task in operating this machine.

- The machine can be adjusted to erect cartons of different sizes.
- The machine can also deliver the erected cartons in various ways:
- With bottom up
- With bottom down
- On to a conveyor
- Down a chute through the floor
- On to special designed pusher of various length
- Or a combination of these alternatives

Machine specifications:

- Capacity: 24 cycles/min.
- Carton size: Adjustable – normal width: 400mm length: 600mm
- Power consumption: 0,2Kw
- Voltage: 3x220VAC 50Hz (other voltages on request)
- Air consumption - average: 160 NI /min – at 24 cycles/min
- Air consumption – peak: 400 NI /min
- Air pressure: 6-7 bar
- Air connection: Minimum 8mm inside diameter.
- Compressed. air quality: DIN ISO 8573-1 class 3
