

# FP Automated packing line

The most efficient packing line in the market

**Smart, user friendly, reliable and steady with very high capacity.**

In combination with the MAREL SB 3000 Speed batcher, our customers have reported a significantly higher capacity than the theoretical capacity of respectively 14.4 and 15.6 MT/hour.

By developing a new generation of machines focusing on maximum capacity of each individual machine, FP has succeeded in achieving a balanced product flow through the packing lines with no significant bottleneck lowering the total capacity of the line. This balanced flow is of course depending on excellent logistics in front and after each individual line.
