

FP Ice leveling machine

FP Ice Leveling Machine is developed to move the boxes from side to side in the weaving length without stopping the box at the conveyor.

The functionality of the machine is to spread the topping of ice and place the fish for comfort cooling. The machine can be installed directly in the existing packing line. The ice on the box edge will be removed for easy and high quality lid application.

Adjustments:

- Length of shaking movement
- Speed of shaking movement
- Time for shaking movement
