

FP Manual packing lines

The manual packing line can operate with high capacity, but requires more people involved.

First Process can deliver a wide range of packing lines from the simple manual lines for small quantities to fully automatic high capacity lines.

The manual packing line can operate with high capacity, but requires more people involved.

By using one electric driven hopper for each type/size of fish the line can have 2 packing stations.

Each station consist of one operator levelling the fish in the box and the next operator use the check weight for correct content in each box. Depends on capacity there need to be one operator to add the lid on the box and do the strapping of the finished box.

Small investment for an efficient manual line with low tech level.

Together with our customers world wide we have adapted our packing lines to the actual requirement according to manning and tech level.
